Required Elements

Some of the following represents local usage in addition to what EDM mandates. For a fuller discussion, see Europeana Data Model (EDM) Template for use with University of Chicago Library Digital Collections.

- dc:title.
- dcterms:title. Copy value of dc:title.
- dcterms:date. “Recommended practice is to express the date, date/-time, or period of time according to ISO 8601-1 [ISO 8601-1] or a published profile of the ISO standard, such as the W3C Note on Date and Time Formats [W3CDTF] or the Extended Date/Time Format Specification [EDTF]. If the full date is unknown, month and year (YYYY-MM) or just year (YYYY) may be used. Date ranges may be specified using ISO 8601 period of time specification in which start and end dates are separated by a '/' (slash) character. Either the start or end date may be missing.” (<https://www.dublincore.org/specifications/dublin-core/dcmi-terms/#http://purl.org/dc/terms/date>)
- dcterms:identifier. String-literal values for locally-created ARK identifiers are used, e.g., "<https://n2t.net/ark:61001/z9m865s34c01>". Note: dc:identifier may be used for any original identifiers occurring in provided metadata.
- dc:language for TEXT objects and for other object types if there is a language aspect. Language codes conforming to ISO 639 are used as values.

- dcterms:language. Copy value of dc:language.
- dcterms:spatial. Values from Getty’s Thesaurus of Geographical Names (TGN) are used.
- dcterms:type. Values should be drawn from the “DCMI Type Vocabulary”.¹ These are Collection, Dataset, Event, Image, InteractiveResource, MovingImage, PhysicalObject, Service, Software, Sound, StillImage, Text. “Note that digital representations of, or surrogates for, [PhysicalObject] should use Image, Text or one of the other types.”
- edm:type must occur and must use one of the following values (in upper case): TEXT, IMAGE, SOUND, VIDEO or 3D. (EDM specification). Map values for dcterms:type as follows.

```

Image : IMAGE
MovingImage : VIDEO
Sound : SOUND
StillImage : IMAGE
Text : TEXT

```

Local usage also specifies the following:

- erc:who The value is drawn from dc[terms]:creator, dc[terms]:contributor, or dc[terms]:publisher, in that order. If none of those have values, then use erc:who “(:unkn) unknown”.
- erc:what The value is drawn from dc[terms]:title or dc[terms]:description, in that order. If dc[terms]:title is “(:unkn) unknown” and dc[terms]:description is not supplied, then use erc:what “(:unkn) unknown”.
- erc:when The value is drawn from dcterms:date.
- erc:where The value is drawn from dcterms:identifier.
